

## **Post-Doctoral position on mycobacterial pathogenicity at IPBS – Toulouse (France)**

A postdoctoral position (2 years) is open in the laboratory of Dr. Christophe Guilhot within the department "Tuberculosis & Infection Biology" at the Institut de Pharmacologie et de Biologie Structurale, CNRS and Université Paul Sabatier Toulouse (France).

The candidate will conduct research on mycobacterial pathogenicity using various approaches including bacterial genetics, cell biology and animal model infection. The successful applicant will work in a dynamic research institute involving more than 70 microbiologists, biochemists, molecular biologists and cell biologists working on various aspects of mycobacterial virulence and host-mycobacteria interactions (<http://www.ipbs.fr/>).

Applicants must have a PhD in microbiology, cell biology or immunology with strong interests in the area of infectious diseases. The project will involve genetic engineering of mycobacteria, high throughput sequencing, and work with animal models. Therefore, previous experience in one of these fields will be preferred.

The application should include a curriculum vitae, a statement of scientific interests and accomplishments and the names and contact information for two references. It should be sent to: Christophe Guilhot- CNRS IPBS UMR5089, 205 route de Narbonne, 31077 Toulouse, email: [Christophe.Guilhot@ipbs.fr](mailto:Christophe.Guilhot@ipbs.fr)

**Deadline for application : Feb 20, 2017**

Application will be examined at the end of February 2017 with expected interview in March 2017.
